

Smart TestTM

CUTTING EDGE TEST CASE GENERATION TOOL

Product Features

- **Eliminates redundant test cases**

Billions of test combinations can be reduced to only a hundred highly effective pairwise test cases

- **Embeds requirements in the test data**

Requirements / Business rules can be entered in simple English prose format. These rules can then be selectively applied to the test set thereby forcing or excluding certain test conditions.

- **Business rule vs. test cases matrix.**

See which test cases satisfy a particular business rule.

- **Easily organizes test cases.**

Test cases can be grouped, assigned to members in the enterprise, and organized by project.

- **Import data from existing Excel spreadsheet**

Other Benefits / Features

- **Generates a scientifically accurate set of test cases.**

If you had 10 testers write test cases for your application, you would get 10 different sets of test cases. With SmartTest, you always get one set—the most accurate.

- **Can be used by Testers, Developers, and Business Analysts.**

SmartTest is flexible—it can be used by anyone in the development organization.

- **All Requirement types**

SmartTest works whether your organization has detailed functional requirements or no requirements at all.

- **Easily update test cases**

Implementation changes? Requirements changes? Need to add a parameter or value? Simply modify the test input and your test cases are updated.

- **Export tests to automated testing tools such as WinRunner and Robot.**

SmartTest can save you weeks in scripting time.
